KDONOL –SDF (SILICONE DEFOAMER)

KDONOL- SDF is a low-toxicity admixture of silicone based de-foaming agents, and multiple specialty surfactants. It is comprised of solid and crystalline particles with optimized performance for faster suppression and breaking of foams in multiple aqueous systems. Furthermore, it can also be used for mist or foam drilling. With its exceptional performance standards, it is capable to work in any specific solution type or salinity level, without affecting quality or texture of solution.

AREAS OF APPLICATIONS

- **Pharmaceuticals**
- **Textile Industry**
- **Paints & coatings**
- **Paints & coatings**
- **Detergents**
- **Metal Industry**
- **Paper and pulping industry**
- **Oil refining and crude oil**
- **Microbiological fermentation**

PRODUCT FEATURES

- **Consistent texture**
- **High performance that is not affected by salinity or type of the fluid.**
- **High stability as well as high efficiency**
- **Adequate Solubility**
- **Easily dispersible in water**
- **Low dosage and works over higher pH range.**
- **Low barrier to transfixion of foam membrane by antifoam**
- **Cost competitive**
